

Prainsa Saudi Arabia Precast Concrete Co., Dammam 31481, Saudi Arabia

Prainsa Group sets up in Dammam, Saudi Arabia

Prainsa Precast Concrete is a major manufacturer of hollow core and precast concrete elements with a particular focus on skyscrapers, commercial buildings, distribution centres, shopping malls and Bridge construction. Today, Prainsa is synonymous with an array of quality services which encompasses technical planning, civil engineering, manufacturing of precast concrete elements together with its transportation, as well as roof assembly and finishing touches to the building. Prainsa also manufacture concrete railway sleepers as part of its contribution to railway infrastructure.

Bianchi Casseforme's Speedy

Nordimpianti System's Extruder in action

Founded in 1973 in Zaragoza, Spain, Prainsa has unwaveringly harnessed the latest technology to offer clients customized services and/or complete solutions while growing into a key player in the construction industry far beyond its European shores. In fact the Prainsa Group today owns a stable of 20 factories spread all over Spain, France, Chile, Argentina, Peru and the recently opened set-up in Dammam, Saudi Arabia.

Expanding in the Middle East became a reality when Prainsa teamed up with a cement producer based in Dammam. The Dammam factory has a production facility of 50,000 m², designed to produce hollow core slabs and prestress beams, wall panels and heavy duty precast elements. The concrete delivery system inside the factory is serviced with a compact yet distinctive machine that allows mobile concrete distribution. Known as Speedy and supplied by Bianchi Casseforme S.r.l., this 1-man operating 3-4m³ machine facilitates both the delivery and the casting of the wet or dry concrete without stalling the production process. Indeed, the Speedy has long proved a winner in solving problems concern-

ing distribution and inside load equalization of concrete guaranteeing a rapid yet gradual discharge of concrete into precast plants even in areas constrained for space. Engr. Miguel Amadeu Francisco, General Manager enthused: "It is a simple but very effective machine."

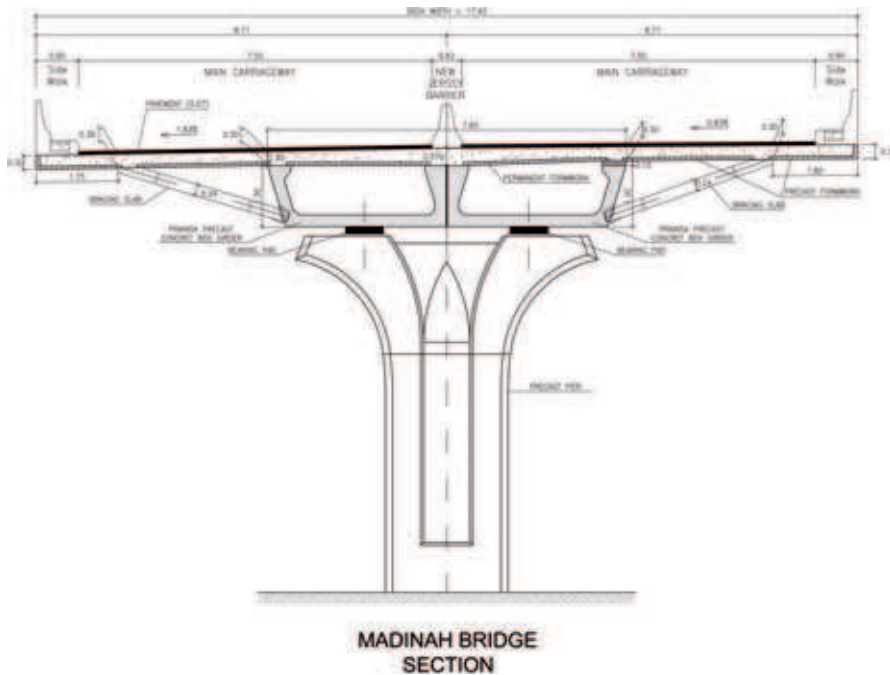

Prainsa in Saudi Arabia offers knowhow coupled with innovative solutions within the precast industry particularly large span beams for warehouses up to 50m span, bridges and so on. The company's success story is inextricably bound to Nordimpianti System – the partner chosen for the production of hollow core slabs ranging from 150-200-250-300-500mm high. Eng. Miguel Francisco stressed that Nordimpianti System's extruder technology was the obvious choice following the Italian company's track record in both the European and South American Prainsa factories. "The support and satisfaction throughout our dealings with Nordimpianti has been truly excellent, Eng. Francisco affirmed, "Nordimpianti was proactive from delivery, to start-up and production stages. Today, we can also witness an excellent engineering and after-sales support service

from Philip A Tabone International who is constantly available in the area to provide this type of support."

The state of art factory in Dammam is producing precast elements since 2008 and managed to supply precast solutions to famous projects like General Electrics new industrial facility, Academic School in Riyadh (roof span of 30m), etc.

Eng. Miguel Amadeu Francisco

Madinah Bridge

Engr. Miguel Francisco announced that during this year the group is planning to establish a new facility in Madinnah, where they are expecting to construct a bridge with Precast post tensioned box beams, and it is anticipated that even larger projects will be contracted in the near future.

Perfectly in line with the Group's vision, Prainsa in Dammam responds to clients' needs with a commitment to deliver expertise, high tech and support to meet delivery dates and deadlines. "The goal of our job is to fulfill our commitments, earning our client's trust, and permanently proving our desire to provide an honest and quality service."
